

Spruce floor treated with white hard-wax oil

Maintenance instructions

Hard-waxed wooden floors

Cleaning and care of wooden floors treated with hard-wax oil

In hallways, there should be a good quality entrance mat to collect as much hard and wet dirt as possible. Always use water sparingly, as wooden surfaces can sustain damage. In order to avoid scratches and unnecessary wear to the surface treatment, put felt furniture pads under the legs of chairs, furniture or other items that are frequently moved back and forth on the floor. Floor protectors should be used under office chairs with wheels.

Floor care

Cleaning when necessary

Wash Care 8101 is an effective detergent for cleaning dirt on hard-wax oiled wooden floors.

APPLICATION AREAS

For all of Baseco's hard-wax oiled wooden floors. Can also be used as a detergent for lacquered floors.

1. Damp cleaning.
2. Add 3 capfuls to approximately 5 litres of cold water. We recommend using a mop with microfibre cloth. Use a slightly damp microfibre cloth. The surface should be dry 1-2 minutes after wiping.
3. Wipe the floors dry if necessary.
4. Please refer to the relevant technical data sheets.

REMOVING STUBBORN STAINS

Mix Saicos 8101 detergent with water in a ratio of 1:1, moisten a cloth and work on the stain. More difficult stains, such as shoe scuff marks, can easily be removed with Saicos 8100 Clear / 8111 White Maintenance Wax. Shake the jar and apply the detergent on a scouring pad or lint-free cloth. Rub the stain and wipe away the dissolved dirt.

Maintenance

Easier maintenance with wax

SAICOS Wax Care for easy maintenance: 8100 Clear / 8111 White.

APPLICATION AREAS

For all of Baseco's hard-wax oiled wooden floors. Wax Care 8111 for white-waxed floors / Wax Care 8100 Clear for other floors.

Use the maintenance wax to easily refresh the hard-wax oiled surface when needed.

1. Shake the wax well before use.
2. Apply one capful of wax (for approx. 1 m²) to the surface and spread evenly with a lint-free cloth or a mop fitted with a dry microfibre cloth.
3. Leave to dry (approx. 45 min).
4. Please refer to the relevant technical data sheets.

Make sure the floors are clean and dry before applying.

Accessories & recommendations

RECOMMENDATION FOR HARD-WAX OILED WOODEN FLOORS

For our hard-wax oiled wooden floors, we recommend initial gentle maintenance immediately after installation to supplement the surface treatment. This is partly to clean the surface after installation, but also because it is easy to access all the surfaces before furnishing the room. Right from the outset, you get a floor that is even easier to maintain.
